-!- FUNCTION: CHEMOATTRACTANT FOR BLOOD MONOCYTES, MEMORY T HELPER CELLS AND EOSINOPHILS: CAUSES THE RELEASE OF HISTAMINE FROM BASOPHILS AND ACTIVATES BOSINOPHILS. BINDS TO CCR1, CCR3, CCR4 AND CCR5. ONE OF THE MAJOR HIV-SUPPRESSIVE FACTORS PRODUCED BY CD8+ T CELLS. RECOMBINANT RANTES PROTEIN INDUCES A DOSE-DEPENDENT INHIBITION OF DIFFERENT STRAINS OF HIV-1, HIV-2, AND SIMIAN IMMUNODEFICIENCY VIRUS (SIV).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -:- SUBCELLULAR LOCATION: Secreted.
-:- TISSUE SPECIFICTY: T-CELL AND MACROPHAGE SPECIFIC.
-:- INDUCTION: BY mitogens.

This sequence represents the C-C chemokine RANTES. The invention relates antagonistic activity. The truncated chemokines are specifically residues is activity. The truncated chemokines are specifically residues 26 to 91 of the RANTES sequence (this sequence) or residues 29 to 99 of the MCP2 sequence (see AAY05300). The new chemokines are useful as medicaments, for diagnosis and/or treatment of diseases which require antagonistic activity of a chemokine e.g. inflammatory diseases. HIV infection, tumours, and anajogenesis—and haematopoiesis—related diseases. The invention also relates to the use of CD26/DPP IV for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          C-C chemokine; RANTES; MCP2; chemokine antagonist; inflammatory disease; HIV infection; tumour; angiogenesis-related disease; autoimmune disease; haematopoiesis-related disease; CD26/DPP IV; immune disease; diagnosis; atherosclerosis; pulmonary disease; skin disorder; therapy.
       This sequence represents full length human RANTES (Raised on Activation, normal T cell derived and Secreted). The DNA encoding this sequence was cloned from a human bone marrow lambda gill cDNA library using the primer sequences given in AAT30330-33. RANTES was used in the design of peptides which act as antagonists to RANTES or to MIP-lalpha (see also AAR97666-68). These peptides may be used in the treatment of asthma, allergic rhinitis, atopic dermatitis, atheroma/atheroscierosis or rheumatoid arthritis by inhibiting or reducing inflammation mediated by RANTES or MIP-lalpha. They are also useful in studying RANTES induced chemotaxis, mobilisation of Ca2+ and receptor binding.
                                                                                                                                                                                                                                                                                                                                                                                                                           1 MKVSAARLAVILIATALCAPASASPYSSDTTPCCFAYIARPLPRAHIKEYFYTSGKCSNP 60

                                                                                                                                         Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in AAR70786-802. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in Sf9 cells in the presence of reduced glutathione and dithiothreitol.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polypeptide functioning as antagonist to RANTES or to MIP-1-alpha used in the treatment of e.g. asthma, allergic rhinitis, atheroma/atherosclerosis or rheumatoid arthritis
Screening for cpds. with anti-heparanase activity - by detecting inhibition of heparin or heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer.

```
This sequence represents the wild type C-C chemokine Regulated on Activation Normal T-cell Expressed and Secreted (RANTES). The invention relates the generation of amino-terminal truncated C-C chemokines, having chemokine antagonistic activity. The new chemokines are useful as an endicaments, for diagnosis and/or treatment of diseases which require antagonistic activity of a chemokine e.g. inflammatory diseases. HIV infection, tumours, and angiogenesis- and hematopoiesis-related diseases, including auto-immune diseases, atherosclerosis, pulmonary diseases and skin disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wild type, C-C chemokine; monocyte chemotactic protein 2; MCP2; HIV; regulated on activation normal T-cell expressed and secreted; RANTES; truncation; antagonist, medicaments; diagnosis; inflammation; infection; tumour; anglogenesis; hematopoissis; autoimmune disease; atherosclerosis; pulmonary disease; skin disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MKVSAARLAVILIATALCAPASASPYSSDTTPCCFAYIARPLPRAHIKEYFYTSGKCSNP 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the wild type C-C chemokine Regulated on Activation Normal T-cell Expressed and Secreted (RANTES). The invention relates the generation of amino-terminal truncated C-C chemokines, having chemokine antagonistic activity. The new chemokines are useful as medicaments, for diagnosis and/or treatment of diseases which require antagonistic activity of a chemokine e.g. inflammatory diseases, HIV infection, tumours, and anglogenesis and hematopoiesis-related diseases, including auto-immune diseases, atherosclerosis, pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Wild type; C-C chemokine; monocyte chemotactic protein 2; MCP2; HIV; regulated on activation normal T-cell expressed and secreted; RANTES; truncation; antagonist; medicaments; diagnosis; inflammation; infection; tumour; angiogenesis; hematopolesis; autoimmune disease; atherosclerosis;

The invention relates to a cross-over protein produced by chemical ligation of at least two functional protein modules derived from at least two functional protein modules derived from at least two parent protein molecules. The cross-over proteins can be used in pharmaceutical compositions for therapy of inflammatory and infectious diseases including AIDS, and for indications of hematopoiesis and chemoprotection. They are also useful for treatment of asthma, allergic chemoprising a collection of cross-over proteins is useful for screening for cross-over proteins that are receptor ligands. The libraries comprise for cross-over proteins that are receptor ligands. The libraries comprise functionally diverse compounds therefore improving the drug discovery process. The proteins and libraries are exemplified by the preparation of cross-over chemokines comprising various combinations of peptide cegments derived from RANTES, SDF-1 (stromal cell derived factor 1), VMIP (viral Macrophage Inflammatory protein) and other such chemokines. The present sequence represents a native amino acid fragment of RANTES.
                                                                                                                                                                                                                                                                                                                                                                                    Chemokine; cross-over protein; pharmaceutical; inflammatory; AIDS; viral; infectious disease; hematopoiesis; chemoprotecthon; atthma; RAPTES; wMIP; allergic rhintis; arcpic dermatitis; rheumatoid arthritis; SDF-1; MPAV; stromal cell derived factor 1; Macrophage Inflammatory protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MKVSAARLAVILIATALCAPASASPYSSDTTPCCFAYIARPLPRAHIKEYFYTSGKCSNP 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MKVSAARLAVILIATALCAPASASPYSSDTTPCCFAYIARPLPRAHIKBYFYTSGKCSNP 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention concerns the identification of a number of chemokines which can be used to produce derivatives, agonists and antagonists which are then useful in disease treatment. The chemokines include sequences AAB15794, AAB15803-B15813 and AAB1581-B15848. These chemokine derivatives can be used to treat diseases such as autoimmune diseases, antherosclerosis, osteoporosis, HV infection and AIDS, psoriasis, inflammatory diseases, hypertension, basophil-mediated diseases, endotoxaemia, myocardial infarction, acute ischaemia and themmatoid arthritis, and can be used to prevent strokes and as contraceptives. The coding sequences for the chemokines can be used in gene therapy for the same diseases, as well as in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide 3, amide and heterocyclic compounds and saccharide conjugates used for inhibiting chemokine induced activity and for treating e.g. stroke, vascular diseases, autoimmune diseases and tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MKVSAARLAVILIATALCAPASASPYSSDTTPCCFAYIARPLPRAHIKEYFYTSGKCSNP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically mincrease to express them are also useful for producing the proteins. The proteins are useful in genetic one succination, testing and therapy, and can be used as nutritional supplements. They may be used to have a stem cell proliferation, to regulate hammatopoiesis; and in the contents of the polyperior and the contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MKVSAARLAVILIATALCAPASASPYSSDTTPCCFAXIARPLPRAHIKEYFYTSGKCSNP 60
